

Our team of sustainability professionals can tailor our services to meet specific results or offer a provision for ongoing sustainability management during the design and construction stages of a project. We offer the following services:

- > planning and design
- > risk assessment
- > Government design documentation
- > climate change
- > carbon modelling
- > sustainable procurement
- > local Industry Participation
- > social Sustainability
- > policy and management plans

Sustainability Experts

Smart Infrastructure Consulting's team of specialists have a broad range of backgrounds, particularly working within construction environments and on medium to major infrastructure projects. We draw on and consolidate our team's experiences and knowledge to deliver expected project outcomes.

We can provide valuable input into the planning and design process through sustainability in design and life cycle assessment to identify innovative methods to reduce cost and offer a legacy to project delivery.

Team Intergration

Our team are highly adaptable and can operate within different organizational frameworks.

Key triumphs our team have achieved include the development of Government sustainability strategy documents, climate change guidelines, carbon modelling tools and achieving Platinum ratings in the TfNSW Design Guidelines for projects.

Workforce Sustainability

Smart Infrastructure Consulting is the sister company of Indigecco. In addition to the above range of sustainability services, through our wider team, we offer social sustainability services delivering workforce development and project-specific skill development training.

Connect with us to learn how we can undertake your sustainability management services to ensure your team deliver a sustainable, best for project, environment, and community outcome.
